#### ABSTRACT

A method for producing fine resin particles which comprises a step (1) of heating and/or pressuring a mixture of a resin with a fluid not dissolving the resin at an ordinary temperature under an ordinary pressure so as for at least one component of the fluid to take a supercritical state or a subcritical state, and a step (2) of reducing the temperature and the pressure of the fluid; and fine resin particles, fine polyolefin based resin particles, fine polyester based resin particles and fine acrylic resin particles produced by using said method. The method allows the production of fine resin particles which are highly spherical and have a narrow particle diameter distribution with ease.
